

Client Success Story

Medical Center Campus

Personalized
Pattern Project

HPS Architects and LDI Interiors partner on a Medical Center Campus in Marin County

Using LDI's proprietary digital on-demand printing, the design team introduced standard patterns with a twist...

For HPS Architects, the challenge was to unite a variety of departments across multiple buildings using a cohesive design scheme that allowed for variations in color and scale tied to a common theme. Of equal importance was delivering high-performance fabrics that could support staff, visitors, and patients in a high-use, dynamic healthcare environment.

Using LDI's proprietary **digital on-demand printing**, the design team introduced standard patterns with a twist - by changing scale and color, they created an entirely new look for the facility.

Concerns about rigid requirements needed for a custom design (huge quantity, long leadtime) were completely erased - LDI patterns can easily be modified by color and/or scale using a simple online process. We specialize in small-run customs completed within standard leadtimes. That translates to 5-yard minimums, shipped in 15 business days - all for a nominal per yard upcharge

Better yet, the process is future-proof since digital printing means **your pattern is always available!**

EnviroLeather™ Prints

55% TPE | 35% Polyester | 10% Cotton

Featuring our original 100% PVC-free TPE technology with recycled and renewable content, EnviroLeather™ Prints custom patterns are digitally printed at LDI's headquarters in NH.

Achieve the look of a woven textile in a wipeable, durable coated fabric that's easily cleaned with 70 approved products. Formulated for excellent stain and flame resistance required for healthcare environments.
